

Speaker Bio

[Dr. William Soliman, PhD, BCMAS](#), is an entrepreneur, investor, and life sciences executive whose work spans medical affairs, artificial intelligence, healthcare innovation, and capital markets. He is CEO of the Accreditation Council for Medical Affairs (ACMA), where he has helped advance professional standards, credentialing, and workforce development across the global life sciences industry.

Soliman is also Founder of Jolunara Intelligence, a William Soliman company that developed a pharma industry-specific trust layer and role-specific data and knowledge infrastructure for governing AI agents in life sciences. His work focuses on a critical industry challenge: moving AI from experimentation to trusted enterprise adoption through stronger governance, validated knowledge, human oversight, and standards designed for regulated environments.

As Founder, President, and Chief Investment Officer of White Manna Capital Partners, a healthcare-focused investment firm and hedge fund, Soliman brings an investor's perspective to biotechnology, pharmaceuticals, healthcare technology, and emerging innovation. This combination of operating and investment experience gives him a distinctive view of how scientific advances, regulation, technology, commercialization, and capital intersect to shape the future of healthcare.

A frequent speaker and national media contributor, Soliman provides perspective on medical affairs, biotechnology, AI, healthcare policy, commercialization, and life sciences investing. His podcasts have over 1 million collective followers; his current work centers on developing the standards, governance frameworks, workforce capabilities, and technology infrastructure needed to scale AI responsibly across life sciences while protecting scientific integrity, human accountability, and stakeholder trust.
